---

## Change in Behavior or Appearance

This release introduces the following new features and enhancements:

**Web Portal Branding Update:** Aerohive captive web portals now display the new Aerohive logo.

**WebUI:** Disabling the WebUI (also called the virtual access console) no longer affects captive web portal functionality

---

## New Features and Enhancements

This release introduces the following new features and enhancements:

**Client 360 View Improvements:** In support of the improvements made in HiveManager, HiveOS 8.4r3 features more robust timing information, so that administrators can track and troubleshoot client connections to network services and devices.

**Multicast-to-Unicast Conversion:** Multicast frames that contain VLAN information are now converted to unicast frames and delivered to stations on the appropriate SSIDs and VLANs.

---
